ABOUT

B.Tech graduate in Computer Science from Amity University with a strong interest in artificial intelligence and technology-driven problem solving. Strong foundation in programming, analytical thinking, and AI development through academic projects and internships. Quick learner, detail-oriented, and eager to contribute to AI and software development projects.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science and Engineering
Amity University, Noida
2021 — 2025
CGPA: **7.66**

Senior Secondary(XII)
St. Xavier's Senior Secondary School, Delhi
2020
Percentage: **78.2%**

Secondary(X)
St. Xavier's Senior Secondary School, Delhi
2018
Percentage: **85.6%**

EXPERIENCE

Innodata
Data Annotator July 2026 — Present
- Evaluated AI-generated audio and conversational responses for quality, relevance, accuracy, and consistency using defined evaluation criteria.
- Performed comparitive evaluation and quality assessment of AI-generated outputs across different modalities.
- Applied detailed annotation guidelines to provide consistent human feedback for AI model improvement.

Marksman Technologies Pvt. Ltd.
Software Intern May 2024 — July 2024
- Developed backend features and REST APIs for a web-based job portal in collaboration with a cross-functional development team.
- Assisted in backend development by creating and integrating APIs while ensuring seamless functionality with the frontend.
- Contributed to improving application usability and performance through feature implementation, testing and issue resolution.

PROJECTS

Visual Speech Recognition Using Deep Learning
- Developed a lip-reading application using Python, TensorFlow and OpenCV to predict spoken words from video sequences.

- Implemented video preprocessing, frame extraction, dataset preparation, model training, and evaluation using the GRID Corpus dataset.
- Built a Streamlit interface to demonstrate visual speech recognition on sample videos.

AWS RAG Question Answering System
- Built a Retrieval-Augmented Generation (RAG) application using Python, FastAPI, FAISS, and vector embeddings.
- Processed AWS Customer Agreement documents into searchable vector embeddings and implemented semantic document retrieval.
- Developed REST APIs to retrieve relevant document context and generate question-answering responses.

Click Through Rate Prediction
- Built and evaluated machine learning models to predict advertisement click-through rates using historical datasets**.**
- Compared multiple supervised learning algorithms and analysed prediction performance.

SKILLS

Programming Languages: Python, C++, C, SQL
Artificial Intelligence & Machine Learning: TensorFlow, Scikit-Learn, NumPy, Pandas, OpenCV, RAG, Prompt Evaluation
Web Technologies: HTML, CSS, JavaScript, Node.js
Tools & Frameworks: FastAPI, Git, GitHub, Jupyter Notebook, VS Code, Power BI
Soft Skills: Analytical Thinking, Problem Solving, Teamwork
